

Sprint #2 Report: rent.sc

Members: Luke Chang, Josue Leyva, My Pham, Stanley Tran, Michael Wang: Project Owner

11 November 2020

Actions to stop doing:

1. Submitting the Team Status Reports past the deadline
2. Opening pull requests with merge conflicts
3. Leaving compiled code with warnings

Actions to start doing:

1. The team should start using *Planning Poker* as a method for estimating tasks because some tasks were incorrectly estimated last sprint.
2. Assign more tasks so that we won't be lagged behind in schedule.
3. More merging/pull requests to avoid large merge conflicts later on in our sprints.

Actions to keep doing:

A lot of what we have done has been working well:

1. Continue having Scrum meetings that last 15 minutes so that we understand how much progress has been made instead of problem solving issues.
2. The team should allocate separate time for problem solving tasks since some of this would mesh into our Scrum meeting.
3. Express the amount of work done, provide data to update the charts

Work completed/not completed:

Completed:

1. As a renter, I need to know the price and size of the house for each listing so that I can browse listings.
2. As a renter, I want to be able to sort listings by tags, price, etc..

Not Completed:

1. As a landlord, I want to be able to add descriptions, prices, and other specifications to my listing.

Work completion rate:

We completed 2/3 of our user stories during Sprint 2. The last user story is almost complete and should be done by the next sprint. Our total number of estimated ideal working hours is 36 elapsed over 14 days.

From this sprint, we estimated a total of 31 ideal work hours over 14 days. We were able to complete 5 tasks during the sprint period.
